

# CAPSTONE PROJECT

## STUDENT MARKS & RESULT ANALYSIS

**PRESENTED BY**

**STUDENT NAME:** RISHIT GHOSH

**COLLEGE NAME:** GEETHANJALI COLLEGE OF  
ENGINEERING AND TECHNOLOGY

**DEPARTMENT:** CSE – AI&ML

**EMAIL ID:** rishitghosh06@gmail.com

# OUTLINE:

- **Problem Statement** (Should not include solution)
- **Proposed System/Solution**
- **System Development Approach** (Technology Used)
- **Algorithm & Deployment**
- **Result (Output Image)**
- **Conclusion**
- **Future Scope**
- **References**

# PROBLEM STATEMENT:

Educational institutions often struggle to analyze student performance across subjects, grades, and pass/fail outcomes in a consolidated and insightful manner. Manual tracking of academic metrics lacks interactivity and scalability, making it difficult to identify trends, top performers, or areas needing improvement.

# PROPOSED SOLUTION:

This system is designed to transform raw academic data into clear, interactive insights. By using Power BI, educators and administrators can quickly identify trends, strengths, and areas needing improvement in student performance.

## ➤ Data Collection

- Core inputs include student marks, grades, subjects, and exam results.
- Optional extensions: attendance data, teacher assignments, or term-wise performance.

## ➤ Data Preprocessing

- Raw data is cleaned to remove duplicates, handle missing values, and standardize formats.
- Structured into an Excel dataset with clear relationships (students to subjects to results).
- Derived fields such as pass percentage, average marks, and top scorer identification are calculated for deeper analysis.

## ➤ Visualization

- Interactive Dashboard with:
  - Slicers for filtering by class, subject, exam type, or academic year.
  - Charts (bar, line, pie) to show subject-wise averages, grade distributions, and performance trends.

## ➤ Deployment

- Reports can be exported to PDF or Excel for sharing with teachers, parents, or school boards.
- Future scalability: integration with Power BI Service for cloud access, role-based sharing, and mobile viewing.

## ➤ Benefits

- Teachers: Identify weak subjects and struggling students quickly.
- Parents/Students: Transparent reporting of progress.
- Institution: Data-driven decisions to improve teaching strategies and curriculum design.

# SYSTEM APPROACH:

- **System Requirements:** Power BI Desktop, Excel
- **Libraries/Tools Used:**
  - **Power BI visuals:** Card, Pie chart, Bar chart, Table, Slicer.
  - **DAX measures** for average, top scorer, and conditional formatting.
  - **Excel** for data preparation.

# ALGORITHM & DEPLOYMENT:

## Logic:

- **Top Scorer Identification:** DAX formula to extract max marks and corresponding student name
- **Pass Percentage:** Calculated using DAX based on Result column
- **Subject-wise Average:** Aggregated using bar chart visual
- **Conditional Formatting:** Applied to Result and Grade columns for visual clarity

## Deployment:

- Dashboard created in Power BI Desktop
- Exported as screenshot and *.pbix* file for submission
- Interactive slicers allow filtering by Subject, Grade, and Result

# RESULT:

## Key Highlights:

- Total Students: 50
- Average Marks: 67.38
- Pass Percentage: 80%
- Top Scorer: Harsha (95 marks)
- Subject-wise insights and dynamic filtering

# CONCLUSION:

The dashboard provides a clear and interactive view of student performance, making complex academic data easy to understand. It allows educators to simplify analysis by presenting marks, grades, and results in a structured and visually appealing format. Key features include the ability to highlight top performers, track overall pass percentages, and monitor average marks across different subjects. With subject-wise insights, teachers can quickly identify areas where students excel and where additional support may be needed. The interactive filters and charts enable dynamic exploration, ensuring that performance trends can be analyzed at both individual and class levels.

By leveraging Power BI, the system offers scalability, professional presentation, and export options, making it suitable for both local use and potential institutional deployment. Ultimately, it serves as a powerful tool for data-driven decision-making in education.

# FUTURE SCOPE:

- Add Semester-wise and Department-level Filters:

Enhance the dashboard with advanced filtering options that allow users to view performance data by semester, department, or specialization. This will provide more granular insights and help identify trends across different academic units.

- Integrate Real-time Data from Academic Portals:

Connect the dashboard directly to institutional academic portals or ERP systems. Real-time integration ensures that performance metrics are always up to date, reducing manual data entry and improving accuracy.

- Expand to Include Attendance and Internal Assessments:

Incorporate additional datasets such as attendance records, class participation, and internal assessment scores. This will give a more holistic view of student performance beyond exam results.

- Introduce Predictive Analytics:

Use machine learning models within Power BI to forecast student outcomes, identify at-risk students, and suggest targeted interventions. Predictive insights can help educators take proactive measures to improve academic success.

The screenshot shows a Microsoft Power BI dashboard titled "Student Marks - Result Analysis Dataset Visualization". The dashboard includes the following components:

- Visualizations:**
  - Total Students:** 50
  - Average Marks:** 67.38
  - Pass Percentage:** 80.0%
  - Top Scorer:** Harsha
  - Top Marks:** 95
- Pass vs Fail:** A donut chart showing Pass 80% and Fail 20%.
- Average Marks by Subject:** A horizontal bar chart showing average marks for Computer Science, Math, English, Physics, and Chemistry.
- Student Performance Details:** A table showing student performance details across various subjects.
- Filters:** Filter by Subject, Filter by Grade, and Filter by Result.
- Data:** A sidebar showing available fields such as Department, Grade, Marks, Name, Pass Percentage, Result, Semester, StudentID, Subject, Top Marks, and Top Scorer.

The dashboard is currently on page 1 of 1, with a zoom level of 66%.

StudentID	Name	Subject	Sum of Marks	Grade	Result
1	Ankit	Physics	62	C	Pass
1	Arjun	Physics	55	C	Pass
1	Geeta	Physics	87	A	Pass
1	Kavya	Physics	63	C	Pass
1	Rajesh	Physics	79	B	Pass
1	Ritu	Physics	88	A	Pass
1	Rohan	Physics	45	D	Fail
1	Sita	Physics	59	C	Pass
1	Snehal	Physics	43	D	Fail
50			3369
